This file will guide users to install Python and PyQt on Mac. First go to Python official website and download python version 3.2 `https://www.python.org/download/releases/3.2/`, and choose Mac OS X 64-bit/32-bit Installer (3.2) for Mac OS X 10.6 to download. Then you are supposed to follow the installation guide of Python and you will be fine. Next, you are going to download PyQt4 from `http://sourceforge.net/projects/pyqtx/files/Complete/PyQtX%2B_py323_q482_pyqt494.pkg.mpkg2.zip/download` and wait for seconds, it should starts downloading. After that, you should follow the installation guide. finally, you can go to GitHub and find Dancesoft_Simple_Window.py in Dancesoft Simple Window directory and download the file and run it on python 3.2, you will see a window!
